XMULTIPLE announces the release of patent pending FlashPoint USB Memory Pen "Share Drive".

FlashPoint ShareDrive allows users to copy data stored in the FlashPoint flash memory to USB device. TI another USB FlashDrive or a USB Peripheral. The new FlashPoint ShareDrives have an integrated female connector so users can plug a cable or another device into the same USB port in which the FlashPoint SI attached, chaining devices.

The FlashPoint drive technology means that a user does not need a desktop, laptop or PDA to copy files go. The FlashPoint ShareDrive has a folder called "Share", used to store files that can be copied to anoth FlashPoint ShareDrive or USB memory key device that is attached.

The USB FlashPoint memory drive can also be used to copy data from other devices, in a process called is useful when copying data from a digital camera for example. Buttons for Power control, Load and Dur controls the process.

The device is powered by an internal battery, which allows it to be used to copy data from the shared fo the need of external power. It works with Windows 98/Me/2000 and XP or Macintosh OS 9.x and 10.x.

An 8 bits 8051 compatible MCU core runs the show, with 64 Kbytes of internal ROM for firmware and so connection to other devices is through USB 2.0 (full-speed). The FlashPoint Sharedrive comes in differer configurations, from 256MB through 4GB.
