

FlashPoint

ShareDrive

FlashPoint ShareDrive™ – Copy from One ShareDrive to a standard ThumbDrive while you are mobile

FlashPoint ShareDrives™ are designed with a female USB port to provide the means to attach flash memory drives or other USB devices. FlashPoint ShareDrives use Sharing-On-The-Go (SOTG) Technology to copy from one ShareDrive to another or copy to a standard USB Thumbdrive. Copying is as easy as inserting one male USB connector to the female USB connector in the ShareDrive. All ShareDrives have both a Male and Female USB connector to attach units together.

The Advantages :

FlashPoint ShareDrives take the capability of flash memory drives one step further by provide the means for users of the FlashPoint memory drive to plug two units together and copy data from one unit to the other. This is accomplished with out a computer, so the user has complete mobility of share files with friends and business partners. Existing flash drives only have a male USB connector to plug into the female USB on a computer, laptop or palmtop. The FlashPoint memory drive has one male USB connector and one female USB connector which allow another flash memory device to plug into the female USB connector in the FlashPoint. In addition, any device with a male USB connector can be attached increasing the use of the USB port. The FlashPoint is a extension hub as well as a memory flash drive. USB cables can also be plugged into the female USB connector on the FlashPoint to provide the advantage to allow more USB devices to utilize each USB connector on a computer, laptop or palmtop. Have you ever wondered how to provide data to someone away from your computer. You could meet a business contact at lunch and be able to transfer data, (large spread sheets, Power Point Presentation, business contacts, and more.

All USB Devices Attach to FlashPoint Thumbdrives
