ShareCard With Dual Copy Technology
Take Your Flash Card/Flash Drive Experience One Step Further

Introduction

USB flash drives and flash memory cards have become extremely popular. Simply because they can both store large quantities of data and are an ideal way of copying data from one computer to another. The FlashPoint ShareCard takes the Flash Card/Flash Drive experience one step further – Now you can copy all files or folders while on the go. Flash card Copying now has mobility. FlashPoint's patent pending FlashPoint ShareCard is a combination of a flash drive and flash card reader with this remote copying capability as well. The ShareCard revolutionizes the current flash card readers and flash drives on the market. With ShareCard users are now given the ability to operate dual directional copy technology. Our ShareCard is a chip-based firmware and hardware technology. ShareCard is capable with transferring of music files, MP3 files, data files, video files and folders to any other ShareCard or with a standard USB thumbdrive/pen drive.

When mobile, ShareCard gives you the option to copy without the use of a computer or connection device. The FlashPoint ShareCard contains both a male and a female USB connector that enable the uploading and downloading capability. The male USB connector allows you to connect to a PC or other host device for uploading files and data in the convention way. The USB female connector incorporated in the ShareCard enable the links to any other thumbdrive, pen drives or flash memory device. LCD permits you to select the exact files or folders you want to transfer.

Features and Benefits

ShareCard Technology Copies when mobile – Simply plug a male USB from a thumbdirve into the ShareCard female USB connector – And click the "Confirm" button

Copy music, files and folders away from a computer - anywhere and at anytime

Reads multiple Flash Cards (SD/MMC/MS/MS-PRO)

Supports Windows 98SE / ME / 2000 / XP and Mac 0S 9X or Later

Plug and Player – Drive required for win98 / 98SE

About FlashPoint ShareCard

Before FlashPoint ShareCard is introduced, to exchange data and MP3 files while in mobile was impossible. For example, when met a friend at lunch and wants to share the family photos with him, just plug the thumbdrive into the FlashPoint ShareCard and share the files. With the ShareCard you can easily transfer the data you want. FlashPoint ShareCards are small, light weighted, and will fit into a key-ring which makes them the ideal media to carry around. They resist temperature changes, magnetic fields and bumps and knocks (they are solid state) and are the ideal portable storage media. With FlashPoint ShareCards it gives you the ideal way to exchange information when away from a computer. Copying with mobility is now here and it will change how we look at computing. The FlashPoint ShareCard has a built-in flash card reader connector, user can insert a flash card and copy from the flash card to the flash memory chip in the ShareCard; copy the pictures from the flash card to your FlashPoint ShareCard.....all away from a computer.

ShareCard features are listed below.

•*Xmultiple's Proprietary USB FlashPoint with Sharing-On-The-Go Technology:* The FlashPoint ShareCard firmware and hardware provides the capability to copy from thumbdirves or one ShareCard to another just by plugging them together and click the "Confirm" button.

•*Female USB 2.0 Connector:* Unlike all other flash memory devices, the FlashPoint ShareCard enables data transfer to other devices, not just copy from other devices. As the result FlashPoint ShareCard devices can act as a "host" and can accommodate other devices to connected to it.

•*Function Switches:* User controllable bi-directional switch is incorporated to operate Share (upload), Load (download), and Delete functions.

Sharing-On-The-Go (SOTG) Data Transfer – Upload and Download From and To FlashPoint ShareCard

For active people, a ShareCard will copy photographs, files, folders or any other data while mobile. With the ShareCard users do not have to wait until they get back to their computers to transfer music, files and folders. Simply insert a flash card and press the copy button. The FlashPoint ShareCard is designed with a USB connector to connect to a PC, notebook or other similar devices just like conventional thumbdrives. However, the ShareCard can also be used as a flash card reader and a flash memory drive for storage. Therefore a user has the capability to copy away from a power source. Transferring data from the flash card to the ShareCard anywhere at anytime. We also make it easy with the LCD display to select the music, files or folders to share.
